# AR1

chaise longue

## design

Ergonomic measurements are the base for the design. The seating position differs somewhat from the "classic" chaise; AR1 allows active participation, not just resting. Laptop use make a workplace out of AR1!

## materials & production

The AR1 is made of coated EPS and foam. This combination is newly developed and ready for heavy-duty use. It can serve its duty out and indoors, in domestic as well as professional environments. Weather, salt and water resistant makes it a tough piece of furniture. Production of Chaise Longue AR1 takes place entirely in The Netherlands. Manufacturing is done exploiting all available cad cam options.

## Arthur Rottier

Product and industrial designer based in The Netherlands. After gaining longtime experience since 1991 working for others, either employed or freelance, he started up his own productions since 2007.

His fascination to combine the newest production options with smart designs is starting to be fruitful in many directions. The huge challenge in keeping production local, while achieving a great price-quality ratio, is met head-on! His motto: "if you want to design, study everything, but not design!"

## PCS

PCS manufactures and distributes products that are new, fresh and meet all demands that one can expect in 2009. Future heirlooms is the main objective!
